AccuSoft

### *SystemEye upgrade*

MTC provides a full suite of intuitive user-interfaces (HMI/MMI) Human Machine Interface /Man Machine Interface. These products provide the system operator with powerful control over system operation, programming and reporting functions. A common "Look and Feel" is maintained in all of our software to minimize training and possible error in the operation of our photo mask tools.

We are constantly developing advanced features and options which we market to our customers available as standard software upgrades.

MTC's long experience of in-house software development allows us to offer a comprehensive suite of software and control system enhancements and upgrades.

Typical upgrades include:

- ➢ Advanced context-sensitive alarm feature
- ➢ New – PM-planning support feature
- ➢ Trend graph screen for advanced process and system parameter monitoring
- ➢ Production tracking system – Barcode and RFID tag support
- ➢ New - Advanced production report generator
- ➢ New - Browser-based remote system monitoring
- ➢ Interface to customer production management system
  (SECS/GEM, customer's own system, etc)
- ➢ New – Total system backup function

Software upgrades provide enhanced features without compromising the user-friendly elements of our software interface.
